Geosite Wins \$950M Ceiling ABMS Contract

Agreement designates Geosite as key developer for military's Advanced Battle Management System (ABMS)

Palo Alto, CA – Geosite announced today it has been awarded a \$950,000,000 ceiling indefinite-delivery/indefinite-quantity contract for the maturation, demonstration and proliferation of capability across platforms and domains, leveraging open systems design, modern software and algorithm development in order to enable Joint All Domain Command and Control (JADC2).

This contract is part of a multiple award multi-level security effort to provide development and operation of systems as a unified force across all domains (air, land, sea, space, cyber, and electromagnetic spectrum) in an open architecture family of systems that enables capabilities via multiple integrated platforms.

Geosite's cloud-based platform provides streamlined access to a wide variety of geospatial data sources and facilitates secure, map-based collaboration across distributed organizations. Its technology is currently being used by the U.S. Air Force for GEOINT analysis, search and rescue coordination, and COVID-19 decision support.

"Geosite excels at making complex spatial data accessible and actionable for the warfighter," said Geosite Founder & CEO Rachel Olney. "We're the perfect fit for ABMS, which is all about connecting the right data to the right operator at the right time, so we are thrilled to be selected for this award."
